1310nm/1550nm Optical Mux and Demux Modules

Aurora's OP31x2D family of 1310/1550 nm mux (and demux) units are provided as two independent multiplexers (and demultiplexers) in a single module and are designed to minimize the combined insertion loss of the multiplexing and demultiplexing process. Modules are provided with -20 dB test points.

Aurora Networks' multiplexers and demultiplexers are packaged in Aurora's very compact half-depth module for mounting in the CH3000 or PF3000 chassis. The packaging concept for Aurora's family of optical passives is similar to the well recognized LGX package; and, although Aurora's version of the LGX module is slightly narrower (for higher packaging density), it will also mount in any standard LGX chassis. Aurora's implementation maintains the advantages of the LGX concept (which enables easy, snap-in installation) while providing higher packaging density, greater flexibility and scalability to the network operator. When fully loaded, Aurora's CH3000 chassis holds 32 single-width, half-depth optical passive modules.
